ConstantStep MNIST: output-gradient mask comparison

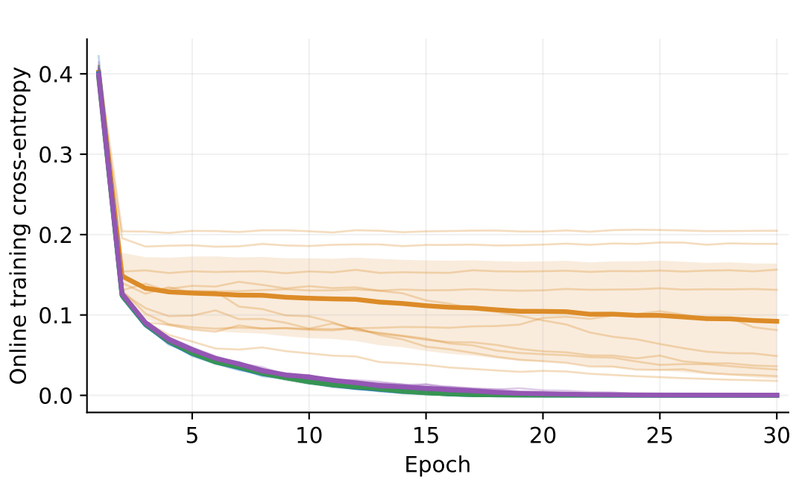

Pulse noise 0 · nominal seed 0 · LR 1.5 · batch 16 · 40/40 runs complete

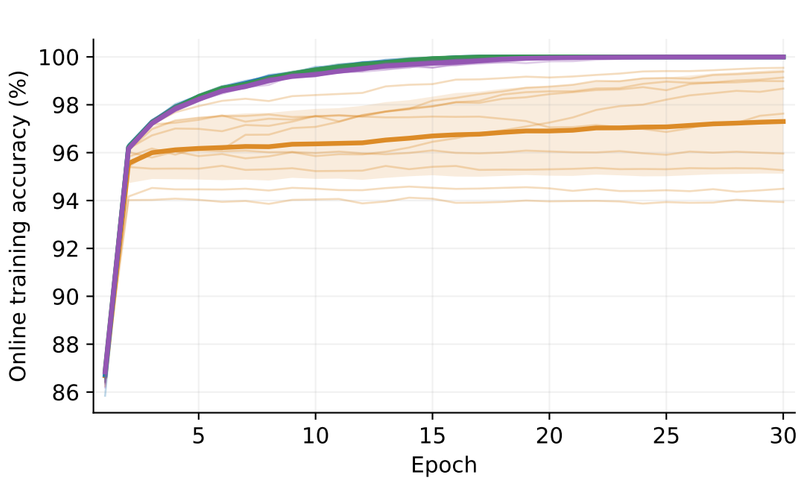

legacy · n=10/10 native · n=10/10 disabled · n=10/10 workaround · n=10/10

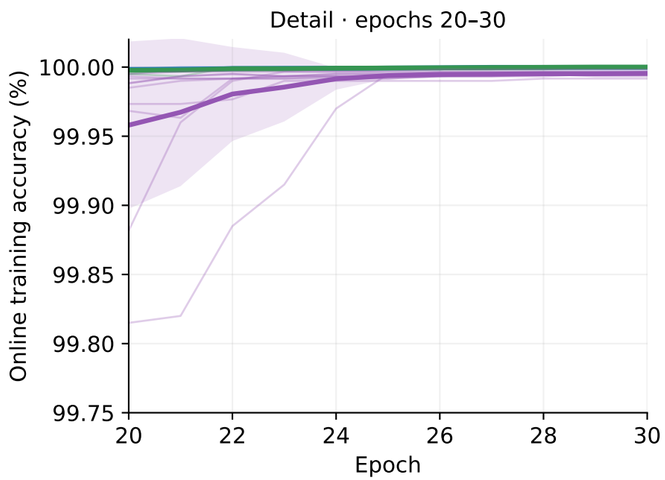

All runs complete

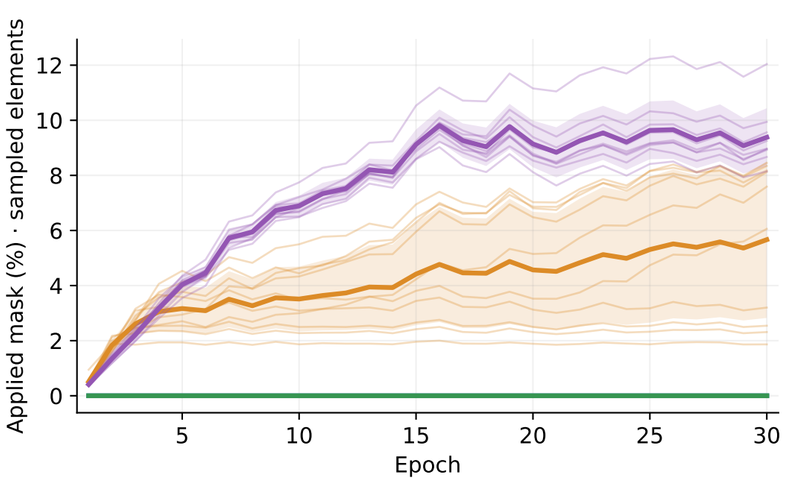

Center panels magnify fixed accuracy ranges at epochs 20–30; values outside these windows are not shown there.

Thick lines: completed-trial mean. Shading: ±1 sample SD (n ≥ 2), not a confidence interval.

Thin lines: individual trials. Dashed: partial runs, excluded from mean/SD. Same seed does not pair backend RNG.

native: experimental mask. workaround: legacy mask, forward NM/BM off. Training metrics online; mask rates sampled.
