Existing API: mask on/off — CPU
W=[1,1], x=[1,1], ADC bound=1; noise/quantization off; perfect backward
Bound management
Perfect forward
Actual clipping
Forward output y
Input gradient dL/dx
Mask on (legacy)
Mask off (disabled)
Bars: measured autograd/output values. Zero values are explicitly marked.
legacy
disabled
dx1 (left)
dx2 (right)
Measured finite difference
